EDUCATION

Jaypee University of Engineering and Technology

Bachelor of Technology in Computer Science Engineering — GPA: 8.9

Guna, Madhya Pradesh, India

Sept. 2021 – May 2025

Tender Hearts School

Senior Secondary Education

Lucknow, Uttar Pradesh, India

Aug. 2018 – May 2020

EXPERIENCE

Junior Backend Developer

EZ Labs Pvt. Ltd.

January 2026 – Present

Onsite

- Designed and implemented scalable features like mass lead outreach, prospect conversion utilities and email tracking for an in-house outreach tool (Synapse). Developed a production ready task scheduling service to handle concurrent jobs and implemented failure tolerance in it. Provided production support for the same as well.
- Developed and maintained an inhouse PPT Template application in WinUI (EZ Studio) with licensing support and also designed a fast search mechanism for a large dataset of labelled images.

Software Engineer - L1

Quantegies Pvt.

March 2025 – December 2025

Remote

- Architected and deployed scalable microservices for SynQ (AI-powered trading journal) and BaQlabs (MBO backtesting platform), implementing Circuit Breaker and Sidecar patterns for critical authentication and business logic services, ensuring high availability and fault tolerance.
- Optimized backend performance through strategic caching mechanisms, advanced SQL techniques (window functions, efficient joins, subquery elimination), and robust error monitoring systems, delivering high-throughput applications with secure API designs and database operations.

Software Development Engineer - 1

Webknot Technologies

May 2024 – March 2025

Hybrid

- Worked with the Backend & System Design teams on large scale projects & clients like Spotdraft, Xencapture, & Flo-Tempo to deliver upto 61% REST API upload speed improvements in tasks like file uploads using multithreaded uploads to AWS-S3 Bucket Storage from client and by implementing techniques like process offloading using process queues and caching.

PROJECTS

isCache: Local Distributed Cache-as-a-Service | Python, Redis, ReactJS, Grafana, Docker

- Built a production-grade distributed in-memory caching library for Python with zero core dependencies. Supports LRU, LFU, and TTL eviction policies with consistent hashing to distribute keys evenly across nodes, plus automatic failover and replication for fault tolerance.
- Features a live real-time dashboard to monitor cache hit rates, a Redis-style CLI for runtime inspection and rate limiting. Available via pip install iscache

Order-Delivery Service | Python(Django), Confluent, Redis, PostgreSQL, Prometheus, Docker

- Designed and engineered a flexible order-rider serve to serve customers with support for multi order delivery per rider.
- Implemented delivery routing and event driven architecture using Redis channels and an analytics service using Confluent Kafka for event data retention.

TECHNICAL SKILLS

Languages:	Python, C++, C, Go, SQL, JavaScript, BASH, HTML/CSS
Frameworks:	Django, FastAPI, Gin, Express, NestJS
Dev Tools:	Docker Stack (Compose & Swarm), Jenkins, AWS, Supabase
Platforms:	Linux, Web, Windows, AWS
Soft Skills:	Leadership, Management, Public Speaking

CERTIFICATIONS & CONTRIBUTIONS

Fastn Track Winner @Hack the Mountains 4.0

Developed Reactify Git and used Fastn Documentation

MLH — Godspeed

October 2023

Specialization in Google Go

Completed specialization in Go Programming of 3 courses including concurrent programming.

Coursera – UCI, Irvine

June – July 2023

Runner Up @Galactic Hacks 2k23

Developed XeroMail- a CLI utility to check for a spam email, written in Go

JUET

October 2022
